

PRODUCT DATA

HA58 (COIL CLEAN)

Product Uses

HA58 is a powerful, concentrated, non caustic, sanitizing detergent, designed for cleaning the surfaces of cooling coils and other air handling systems to remove dirt, debris and other air borne contaminants.

HA58 incorporates water soluble surfactants for grease and oil removal and a blend of inorganic formulations to enhance the suspension of solids to aid the cleaning process and has the added feature of fluorescing under UV light, so that the active ingredients of HA58 can be detected on the surface following the cleaning process.

HA58 acts to keep surfaces clean and maintain a high rate of heat transfer, as well as to enhance anti static properties with a wide range of air handling units, fan coil units and other duct work cleaning applications.

Product Application and Uses

HA58 may be used in a number of applications, but is typically diluted with water in a ratio of 20:1 and 30:1 for general cleaning of walls and surfaces when using such items as sponges and brushes. For pressure washers and steam cleaners the dilution ratio should be 60:1.

HA58 can also be used neat on difficult to remove deposits, however, a small area should always be cleaned as a pretest before use, so as to ensure compatibility with the materials of construction. Materials such as aluminium, some types of plastic and some paint finishes may be adversely affected.

General Specification

Colour:	Pale yellow	pH:	10 - 11
Odour:	Perceptible odour	Form:	Liquid
S.G. at 20°C:	1.09 – 1.12		

Packaging, Storage & Handling

HA58 is delivered in 4 x 5 litre packs or 25 litre drums and should be stored in a dry, well ventilated area and should not be stored in areas susceptible to frost or excessive heat.

HA58 is classified as an irritant and we advise wearing protective clothing, gloves and eye goggles in accordance with the relevant BS EN standards.
