

PRODUCT DATA

HA34

Product Uses

HA34 is a highly effective microbiocide and slimicide, which is extremely effective in controlling microbial growths over a wide spectrum of bacteria, algae and fungi.

This non - oxidising biocide is used to control bacteriological growth within cooling systems and other industrial processes and is active over a broad pH range.

Product Application and Uses

HA34 is normally shot dosed at regular intervals to the system. The quantity of HA34 required will vary according to system conditions and the level of organic fouling. The volume of HA34 required will be calculated upon the system volume and the retention time.

HA34 can be injected directly from the drum or from a dosing tank using a dosing pump.

Wherever possible, HA34 should be dosed automatically.

HA34 is compatible with other products to form part of a water treatment programme for cooling systems to comply with the HSC Approved Code of Practice & Guidance – The control of legionella bacteria in water systems.

General Specification

Colour:	Off-white	pH:	3 - 6
Odour:	Perceptible odour	Form:	Liquid
S.G. at 20°C:	1.095		

Packaging, Storage & Handling

HA34 is delivered in 25 kg or 214 kg drums and should be stored in a dry area.

Avoid storing HA34 in areas susceptible to frost and excessive heat.

HA34 is not classified as hazardous, however we advise to avoid contact by wearing suitable protective clothing, gloves and eye goggles in accordance with the relevant BS EN standards.
