

PRODUCT DATA

SALT CHECK LOW LEVEL ALARM

Description

Electronic sensor to monitor the level of granular, tablet or crystal salt for Brine Tanks or Salt Saturators. The Salt Check is unaffected by the level of water or chlorine, and automatically distinguishes between water, brine solution and salt to give reliable low salt level warning.

The unit comprises of a small control enclosure, which can be mounted on the outside of the Brine Tank, adjacent wall or Softener Controller.

The control enclosure is connected via a plug in connector to a single miniature photoelectric sensor, which is fixed inside the Brine Tank at the required low salt trip point.

The unit operates on Multi range 12-50vAC or DC power supply drawn from the Water Softener controller or optional power pack.

Outputs

A volt free single pole changeover switch capable of accepting up to 5A @ 240v AC is provided for remote indication.

A green LED indicator is provided for visible indicators 'Level OK'.

Features

- No moving parts to clog up with salt
- No holes required on Brine Tank below the water line
- Simple to install and set up
- Fit all Water Softeners with wet or dry Salt Brine Tanks
- Suitable for is use with Bulk Salt Saturators
- Multi range low voltage power supply to suit most Softener Controllers
